12,000
events processed successfully

Improving Data Processing

Background

sportscotland is the national agency for sport and the lead agency for the development of sport, investing Scottish Government and National Lottery resources to build a world-class sporting system for everyone in Scotland.

sportscotland continually strives to ensure these resources are invested wisely so as to achieve best value and maximum impact.

sportscotland has three directorates:

- sports development
- high performance
- corporate services

Improving Data Processing Locations

sportscotland delivers from bases across Scotland, including headquarters in Glasgow, and the **sport**scotland institute of sport in Stirling and regional bases in Aberdeen, Dundee, Edinburgh, Falkirk and Inverness.

sportscotland's Trust Company operates three national training centres:

- Glenmore Lodge
- Inverclyde
- Cumbrae

These centres provide quality, affordable and appropriate residential and sporting facilities for people to develop in sport.

Improving Data Processing Focus for 2011-15

The **sport**scotland corporate plan 2011-2015 had a clear focus: that the organisation invest time, expertise and funding in developing a world-class sporting system at all levels, by deploying resources and assets as efficiently and effectively as possible.

In terms of it being an effective organisation, for the corporate services division, this meant:

1

Delivering priority information management solutions to improve access to information, reporting capacity, efficiency and impact

2

Improving management processes and internal communications to increase organisational integration, responsiveness, effectiveness and efficiency

3

Continuing to improve the processes, systems, facilities and services that are essential to an effective and efficient national agency that adds value to the sports sector

Improving Data Processing

Key Challenges

One of the greatest operational challenges facing **sportscotland** as it embraced Pension Reform, was how to manage the collation and transfer of data efficiently. These included:

Submission on paper forms caused a significant overhead in terms of administration effort.

Data submitted electronically was being captured manually.

Existing processes relied on the payroll team identifying changes and submitting the appropriate data to the fund.

Operational risk - had all the required data been submitted, and was it accurate?

Resource was needed to provide all the required data across the year, but especially the year end, which is the busiest time of year for the payroll team.

Methods of data exchange were insecure and there was a risk of compromising personal data.

Improving Data Processing

The i-Connect™ Solution

Aquila Heywood's award-winning i-Connect™ data exchange solution, designed specifically for employers in the public sector, was the ideal solution for **sportscotland**.

i-Connect:

Addresses the Pension Reform obligations, minimising risk of fines from The Pensions Regulator (TPR)

Automatically identifies changes to the workforce

Provides a straight-through process for submitting data

Reduces effort and costs in supporting the pension scheme

Removes the need for an annual end-of-year return

Provides secure transfer of information to the pension scheme

Allows for future scheme changes, for example, CARE 2015

i-Connect simplifies employer duties. Data is taken directly from the payroll system by i-Connect, which then automatically identifies and processes new joiners, opt-outs and leavers, together with financial information and other member data, thus fulfilling record-keeping requirements in the process.

Improving Data Processing Benefits Delivered

i-Connect was procured and implemented in the first quarter of 2014 when there was a backlog of data for the 2013-2014 year. The first payroll file was processed in March 2014 and, within 30 minutes, i-Connect had identified and processed nearly 50 new starters and submitted a total of c.1,700 events to the pension fund, thus ensuring **sportscotland** met its data exchange obligations for that year.

To date, 12,000 events have been successfully processed, with an error rate of just 0.5%. i-Connect has given **sportscotland** the functionality to meet the requirements for Pension Reform.

“ Using i-Connect, we have eliminated the annual return and reconciliation process with the pension fund. ”

Angela Reid

Payroll Manager - **sportscotland**

Improving Data Processing

Conclusion

i-Connect improves the flow of data from payroll to pensions, minimising manual intervention in the process and:

- Automatically identifies changes to the workforce
- Provides a simple and efficient process for submitting data
- Helps address Pension Reform obligations
- Meets The Pensions Regulator's code of practice on record-keeping

i-Connect reduces the cost and risk associated with processing pension data by automating the submission of data to your pension scheme.
